ABSTRACT OF THE DISCLOSURE

ANTENNA DEVICE AND ITS USE IN A COMMUNICATION DEVICE

10 An antenna device (2) includes a conducting
base (3), an elongate conducting element (7) coupled
to and extending from the conducting base and a
parasitic conductor (9) connected to and extending
from the conducting base. The device is configured
to provide in operation in a plurality of frequency
15 bands omnidirectional radiation patterns in two
mutually orthogonal planes (x-y; x-z). The radiation
of these patterns may conveniently have the same
polarization.
